

Project Status Report

Project Name	Lockheed Martin #2: Digital Twin Simulation		
Date	1/18/2020	Created By	Matthew Janc
Status RAG	Time	Team Member Participation	N/A
Progress Last Week	This week after looking at a deep dive of the code with our technical lead, we were tasked with further exploration on our own(there is alot to cover). We looked at two different aspects of the project including handling data within multiple files as well as the AST of c++ files.		
To Do This Week	We are looking forward to class this week. We have a meeting with LM space tuesday. We have at least two team meetings this week. We need to make sure we understand how we are doing as implementation begins in February.		
New Issues, Risks, Blockers	Not necessarily an issue but it has become very clear that we need to be proactive and advocate for what we need. I believe we did a good job this week however more won't hurt.		
Updates on Issues, Risks, Blockers Raised Last Week	We have the code! Hopefully this allows us to maneuver more on our own, which is a relief.
