Project Status Report

Project Name	Lockheed Martin #2: Digital Twin Simulation		
Date	3/1/2021	Created By	Brandon Roemer
Status RAG	Time	Team Member Participation	N/A

Progress Last Week	Last week team one continues to polish their code and integrate it back into the main branch, as well as looking at how they can integrate some of their code into teams two code so that team two can catch up. Team 1 continued progress on debugging the main code and a slight re-organization to make the code clearer and more concise. Team one also fixed the issue with the incorrect commit messages and cleared the commit history.
To Do This Week	This week we will continue work towards the main task of integrating both models back into the code. In order to do so team 1 will continue with small bug fixes and work out some edge cases for our code. Many of which can be used in teams 2 code so that they can catch up to team 1 faster. We will also have our sponsor meeting this Tuesday to discuss any blockers.
New Issues, Risks, Blockers	Team 1 is having some issues regarding the variation seen within the AST and must create multiple cases to handle each of these variations. While in itself it is not a blocker it creates come hesitancy moving forward as well as increasing the amount of time needed to complete this project. Outside of this issue we currently have no blockers.
Updates on Issues, Risks, Blockers Raised Last Week	Last week we were able to fix our blockers or make progress on them for both teams.
